

TIME TABLE

| TIME | Monday August 30 | Tuesday August 31 | Wednesday September 1 | Thursday September 2 | Friday September 3 |
|---------------|---------------------|----------------------|--------------------------|-------------------------|-----------------------|
| 9.00 - 9.45 | Registration | Suo | McMeeking | Forde | Bernheim |
| 9.45 - 10.30 | McMeeking | Suo | McMeeking | Forde | Bernheim |
| 11.00 - 11.45 | Suo | Bacca | Suo | Bernheim | Forde |
| 11.45 - 12.30 | Suo | Bacca | Suo | Bernheim | Forde |
| 14.00 - 14.45 | Lucantonio | McMeeking | De Simone | Forde | |
| 14.45 - 15.30 | Lucantonio | McMeeking | De Simone | Forde | |
| 16.00 - 16.45 | Bacca | Lucantonio | Poster Session | Bernheim | |
| 16.45 - 17.30 | Bacca | Lucantonio | Poster Session | Bernheim | |
| 18.00 | Welcome Aperitif | | | | |

ADMISSION AND ACCOMMODATION

The registration fees are:

- Participation in presence, 600.00 Euro + VAT*

This fee includes a complimentary bag, four fixed menu buffet lunches (on Friday upon request), hot beverages, downloadable lecture notes.

- Participation online, 250.00 Euro + VAT*

This fee includes downloadable lecture notes.

Applicants must apply at least one month before the beginning of the course. Application forms should be sent on-line through the following web site: <http://www.cism.it>. A message of confirmation will be sent to accepted participants. Applicants requiring assistance with the registration should contact the secretariat at the following email address: cism@cism.it.

Applicants may cancel their course registration and receive a full refund by notifying CISM Secretariat in writing (by email to cism@cism.it) no later than two weeks prior to the start of the course.

Cancellation requests received during the two weeks prior to the start of the course will be charged a 50.00 Euro handling fee. Incorrect payments are also subject to a 50.00 Euro handling fee.

A limited number of participants from universities and research centres who are not supported by their own institutions can be offered lodging and/or board, if available, in a reasonably priced hotel or student guest house.

Requests should be sent to CISM Secretariat by **June 30, 2021** along with the applicant's curriculum and a letter of recommendation by the head of the department or a supervisor confirming that the institute cannot provide funding. Preference will be given to applicants from countries that sponsor CISM.

Information about travel and accommodation is available on the web site www.cism.it, or can be mailed upon request.

* where applicable (bank charges are not included)
Italian VAT is 22%.

Udine August 30 - September 3 2021

MECHANICS OF SMART AND BIO-HYBRID GELS: EXPERIMENTS, THEORY, NUMERICAL SIMULATION

The proposed course aims at creating a bridge between mechanics, chemistry, physics and biology to educate new scientists in the new and fast growing scientific framework of active soft matter. Many health treatments involving drug delivery and tissue transplant technology rely on a deep understanding of the physiological conditions of the living tissue involved. To achieve this, one needs to account for the coupling between the mechanical behavior of the tissue and its biochemical activity at multiple length scales, from intracellular mechanisms to tissue behavior at the organ level. In this framework, most of the scientific problems require cross-disciplinary expertise to be tackled, hence the emerging need for a new generation of scientists capable of combining

fundamental concepts from different disciplines. The course is aimed at researchers and graduate students in the fields of applied mathematics, mechanical and chemical engineering, physics, biology and biophysics. Dr. Zhigang Suo will introduce the concept of hydrogel. Polymeric gels constitute a reliable physical model platform for most of the soft biological tissue constituting the human body hence this represents the foundation of this course. He will provide basic insight on the main mechanical properties of these materials such as adhesive strength, fracture toughness, fatigue resistance and viscoelasticity. Dr. Alessandro Lucantonio will discuss the analytical and computational tools available today to describe the mechanical behavior of gels

with particular focus on their poroelastic behavior, which couples elasticity of the polymer network and species diffusion. Dr. Mattia Bacca will discuss the thermodynamics of active deformation for materials depicted as a microstructural evolution. The phenomenon emerges from a biochemical process, the activity of molecular motors powered by ATP hydrolysis, which alter the equilibrium state of the material, resulting in (active) macroscopic deformation. Dr. Robert McMeeking will discuss the mechanics and thermodynamics of actin polymerization occurring within the cytoskeleton and the mechanics of cell adhesion. This will highlight the active and anisotropic characteristics of the material constituting living cells. Dr. Antonio De Simone will provide an introduction of

fundamental concepts on crawling and deformation driven locomotion of living systems. This will link the motility of a cell with its biochemical activity at the molecular level (actin-myosin, microtubule-dynein). Dr. Nancy Forde lectures will provide insight into experimental techniques for characterization soft matter and measure molecular-scale phenomena. She will then provide theoretical and practical insight on micro rheology, single- molecule mechanics and other techniques to create synthetic molecular motors. Finally, Dr. Anne Bernheim will provide insight into the theory and the experimental techniques utilized to recreate other cell-level mechanisms with in-vitro system and will conclude the course.

INVITED LECTURERS

Mattia Bacca - University of British Columbia, Vancouver, Canada
4 lectures on: Continuum mechanics and thermodynamics of active soft materials

1. Non-equilibrium thermodynamics of the continuum; 2. State variables and microstructure evolution of materials; 3. Energy transduction and chemo-mechanics of materials; 4. Contraction of an active gel.

Anne Bernheim - Ben-Gurion University of the Negev, Be'er Sheva, Israel

6 lectures on: In-vitro reconstitution of the contractile cytoskeleton
1. In vitro system as a model for reconstituting cellular processes; 2-3. Actin based motility driven by actin polymerization; 4. Active gels - self-organization and patterning; 5. Actomyosin gels - contractility and poroelasticity; 6. Spontaneous 3D shape transitions of contractile actomyosin gel sheets.

Antonio De Simone - MathLab, SISSA, Trieste, Italy
2 lectures on: Systems of motors and bio-filaments and their role in cell motility

1. Dyneins and microtubules in eukaryotic cilia and flagella; 2. Shape programming in biological and artificial systems.

Nancy Forde - Simon Fraser University, Burnaby, Canada
6 lectures on: Mechanical properties of biological systems at the nano- and micro-scale

1. (Bio)Polymer mechanics - theory and experiment; 2. Single-molecule mechanics techniques; 3. DNA mechanics; 4. Microrheology - experimental approaches; 5. Collagen mechanics - from molecules to the matrix; 6. Synthetic molecular motors.

Alessandro Lucantonio - The BioRobotics Institute, Scuola Superiore Sant'Anna, Pisa, Italy

4 lectures on: Theoretical and computational modeling of polymer gels
1. Introduction to polymer physics and review of coupled models for swelling gels; 2. Asymptotic analysis of transient and steady swelling phenomena; 3. Poroelastic fracture in gels; 4. Finite element formulation of the coupled model and applications.

Robert M. McMeeking - University of California Santa Barbara, Santa Barbara, USA

5 lectures on: Cell contractility and adhesion
1. Acto-myosin stress fibres and cell adhesion; 2. Biochemomechanical mechanisms of contractility; 3. Model of contractility/signaling interactions and in vitro behavior; 4. Interaction of cells with compliant substrates; 5. Modeling in vivo behavior.

Zhigang Suo - Harvard University, Cambridge, MA, USA

6 lectures on: Hydrogels
1. Hydrogel ionotronics and bioelectronics; 2. Tough hydrogels; 3. Fatigue of hydrogels; 4. Stretchable materials of high toughness and low hysteresis; 5. Hydrogel adhesion; 6. Poroelasticity of hydrogels.
