METAL ADDITIVE MANUFACTURING SCENARIO RESEARCH AND INDUSTRIAL EXPERIENCE

Additive manufacturing (AM) or 3D printing techniques, aim at becoming the new way of producing personalized components beyond the limits of geometry and location. AM has already established itself in the aerospace, energy, and medical sectors as a reliable technology, and many companies are already investing in series production plants based on AM.

This workshop aims at presenting up-to-date information on the latest developments – research and industrial experience – in the field of additive manufacturing techniques for metallic materials, thus providing an international forum for a beneficial exchange of ideas, and furthering a favorable cooperation between research and industry.
